

## Paper in contact with food

**Certificate for:** Meyer Stemmlé  
**Product:** Billerud Light  
**Producing company:** Billerud Skärblacka AB

The paper above is manufactured from virgin fibres with the addition of small amounts of well recognised chemicals. On the basis of information from our suppliers of chemicals, this paper grade is suitable for contact with food. Under foreseeable conditions of use, and where applicable, it complies with the appropriate paragraphs in:

	<b>Edition</b>	<b>Chapter/Section</b>
BfR	2007	A, Empfehlung XXXVI
FDA	2008	Title 21, Chapter 1, §176.170, §176.180
EC/1935/2004	2004	
EC/2023/2006	2006	Annex 1 is not applicable, since the paper is not printed

This means that, under normal and foreseeable conditions of use, the paper does not transfer any constituents to food with which it is likely to be in contact, in quantities which could:

- endanger human health
- bring about an unacceptable change in the composition of the food
- bring about a deterioration in the organoleptic characteristics thereof

The paper is suitable for wrapping of dry, fatty and aqueous food. For packing of aqueous and fatty products we still recommend a suitable barrier to avoid the food to affect the physical properties of the paper.

The information provided in this certificate is to our best knowledge accurate and reliable. The paper is sold without any express or implied warranty as regards fitness for any specific purpose of use. It is the user's responsibility to satisfy themselves as to the paper's suitability for the particular purpose(s) for which the user intends to use the paper and to obtain all necessary information for such assessment.

This certificate is valid for 18 months.
